The header features a stylized mountain range on the left. The mountains are colored in shades of red, orange, and yellow, with a white, dotted snow-capped peak. The background is a light blue sky. The text 'Real Map Menu' is positioned to the right of the mountains.

KANLAON VOLCANO LAHAR HAZARD MAP

LEGEND

- 4 km radius
- Permanent Danger Zone (PDZ)
- Kanlaon Crater
- Areas Highly Prone to Lahars
- Areas Least to Moderately Prone to Lahars
- Municipal Boundary
- Barangay Boundary

Generation of this hazard map for Kanlaon is based on the assumption that the activity or eruption will occur from the present active cone (Kanlaon Crater).

Hazard zonation is subject to change in the event of migration of eruption vent.

Municipal and barangay boundaries used are approximate and based on PHGIS 2011 data.

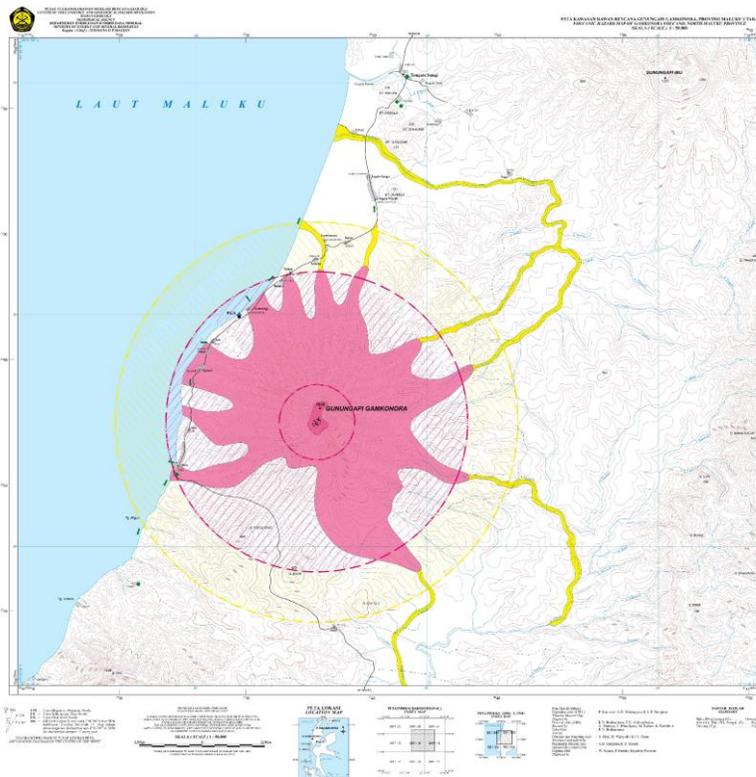

Basemap is NAMRIA (SAR, 2013).

Volcano Fact Sheet

Yasur Volcano – Yenkahe Caldera

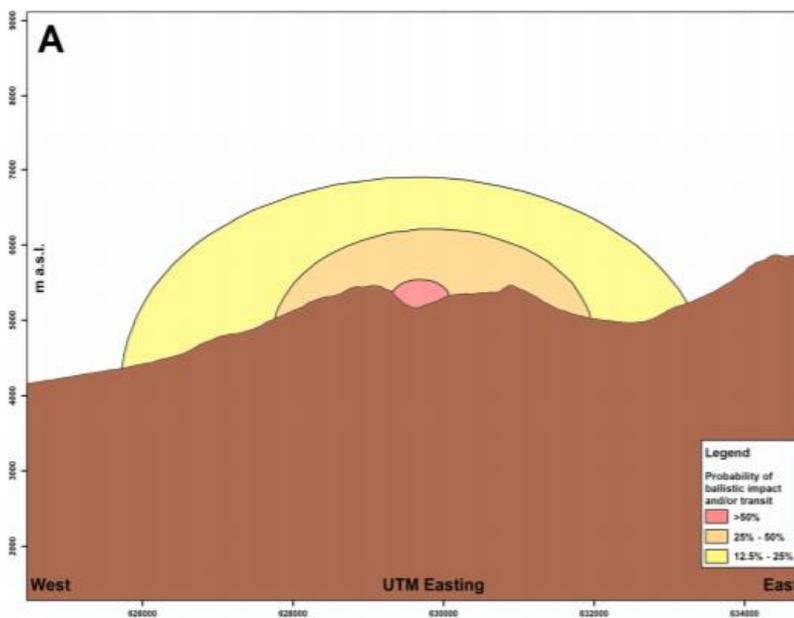

Description

- Yasur, located at the SE tip of Tanna Island, is a mostly unvegetated 361-m-high scoria cone with a nearly circular, 400-m-wide summit crater.
 - Yasur is the most frequently visited of the Vanuatu volcanoes.
 - It has been in more-or-less continuous activity since Captain Cook observed ash eruptions in 1774.
 - This style of activity may have continued for the past 800 years.
- (www.volcano.si.edu)

(Alvarado et al. 2021)

Map element	Description
action	The map describes what to do during unrest or eruption
alert level scheme	The alert level scheme for the volcano is described
area map	An area map is included that shows the regional context
audience and/or purpose	The intended audience or purpose is described
cartographic legend	A legend is provided for cartographic symbols (e.g. roads, lakes)
color scheme order	Color scheme is in order (e.g. red = high hazard)
conditional validity	The conditions under which the map is valid are described (e.g. VEI < 5, central vent eruptions)
coordinates	Geographic coordinates are shown
eruptive history	The eruptive history of the volcano is described
evacuation route	Evacuation routes are visually depicted on the map
expiration	The conditions that will trigger map revision are described (e.g. summit changes, a time limit, new information)
glossary of terms	Geological terms are defined in a glossary section
hazard details	Hazard processes are defined or described
hazard travel time	Hazard process arrival times or velocities are depicted or described
hazard zone description	Hazard zones have accompanying descriptions beyond labels
hazard zone legend	A legend is provided for the hazard zones
impact details	Impact details (e.g. roof collapse, crop damage) are described
impact locations	Specific towns or drainages are named or listed
insets	Insets containing non-map information are included
methods	Hazard zonation methods are described in the text
more information source	Sources for additional information are given
north arrow	A north arrow is included
oblique image included	Oblique (3D) inset images of the terrain or hazard zones are shown
other volcanoes	Hazard zones from nearby volcanoes are also shown on the map
past deposits	Deposits from previous eruptions are shown visually
person hours	The amount of time required to make the map is stated
photos	Photos of the volcano, deposits, impacts, etc. are shown
population information	Population information (e.g. numbers of inhabitants in towns or hazard zones) is depicted or described
references	Reference literature is cited
safe areas	Safe areas, including shelters or muster points, are depicted
scale bar	A scale bar is included
version number	Version numbers or a revision history is provided
wind rose diagram	A wind rose diagram of either wind directions or tephra dispersal directions is provided
